

CABLE ASSEMBLIES

*A provider of high quality bespoke/custom cable assemblies
for control, signal, power & harsh environment*

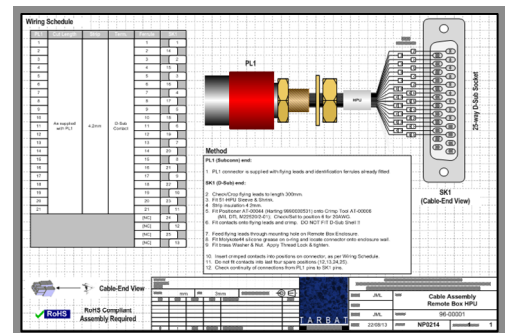

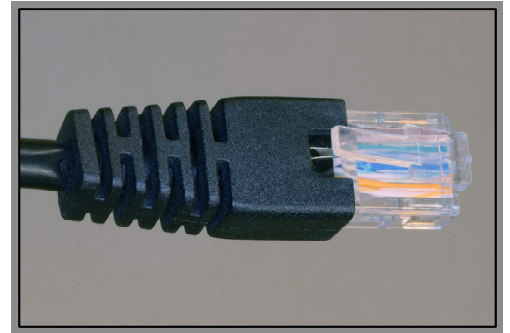

CABLE ASSEMBLIES – CONTROL & SIGNAL

We manufacture and supply custom cable assemblies to a number of clients, across various industrial, marine, automotive and commercial applications.

Low & medium volumes are hand assembled at our Keith premises, where we have a range of connector tooling available.

If you require higher volumes then our carefully selected partners in the Far East can supply high quality assemblies, including overmoulding of connectors (e.g. D-types; RJ-45, etc.), at lower cost.

All cable assemblies are fully defined and revision controlled within our own documentation processes. By default, all products are supplied as RoHS compliant (lead-free) but we also supply leaded assemblies on request.

CAPABILITIES

- Various tooling held locally, e.g. Molex, Daniels, Stocko
- Bespoke cable markings (heatshrink, ferrules, etc.)
- One-off & prototype builds
- Low & medium volumes – UK hand assembly
- Higher volumes – low cost, Far East assembly
- Overmoulding
- Harsh environment – subsea, oil & gas, military
